incompatible reaction"
/note="Vector: pBluescript SK(-); Site_1: EcoRI; Site
XhoI; supplier: UC Berkeley, PGEC; sequencing: The
Institute for Genomic Research. Whole plants were
challenged with 450,000 sporangia/ml P. infestans isc
US-1 (US940501) in Biotron (Madison, Wisconsin). Leaf
tissue was collected at 1, 2, 5, 12, and 24 hours
post-challenge and frozen in liquid nitrogen immediat
upon removal. Kennebec plants showed no signs of HR.
Katahdin plants (susceptible to P. infestans US-1) we
used as controls and showed infection. NOTE: We cann
exclude the possibility that this sequence is actual
derived from Phytophthora rather than potato. ".

S Novel GapC multiple epitope fusion polypeptide comprising antigenic determinant of Streptococcus dysgalactiae, S. agalactiae, S. uberis, parauberis, or S. iniae GapC protein useful for treating mastitis in vertebrates.

Claim 9; Fig 6A-C; 116pp; English.

The present sequence is that of a novel multiple epitope fusion protein, designated PolyGap4, comprising the entire amino acid sequence of the Streptococcus dysgalactiae GapC plasmin binding protein in addition to unique amino acid sequences from the Streptococcus parauberis and Streptococcus agalactiae GapC proteins. The multiple epitope protein is produced in host cells transformed with an expression vector comprising a produced in host cells transformed with an expression vector comprising a chimeric gene (see ABA91327) encoding the protein. PolyGal4 is an example

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        420
                                                                                                                                                                                                                                                                     60
of novel GapC multiple epitope fusion proteins of the invention that comprise epitopes from 1 or more of S. dysgalactiae, S. agalactiae, S. parauberis, Streptococcus uberis and Streptococcus iniae (see AAM50665-69). The multiple epitope fusion proteins are used in claimed vaccines for treating or preventing a bacterial infection in a vertebrate, especially a streptococcal infection, and particularly mastitis. They are also used in claimed methods of detecting Streptococcus antibodies. The multiple epitope protein is capable of eliciting broad immunity against variety of streptococcal infections while minimising the number of antigens present in the final formulation and concomitantly reducing production costs. (Updated on 29-AUG-2003 to standardise OS field)

The present sequence is that of the GapC plasmin binding protein,

DysGapC, of Streptococcus dysgalactiae ATCC 43078, an isolate from a case
of bovine mastitis. The invention relates to novel GapC multiple epitope
fusion proteins that comprise epitopes from 1 or more of Streptococcus
c dysgalactiae, Streptococcus agalactiae, Streptococcus parauberis,
c streptococcus uberis and Streptococcus iniae (see AAM50665-69). A claimed
example is PolyGap4 (see AAM50664). Expression vectors and host cells for
production of the multiple epitope fusion proteins are provided. The
multiple epitope proteins are used in claimed vaccines for treating or
preventing a bacterial infection in a vertebrate, especially a
streptococcal infection, and particularly mastitis. They are also used in
c claimed methods of detecting Streptococcus antibodies. The multiple
epitope proteins are capable of eliciting broad immunity against a
variety of streptococcal infections while minimising the number of
antigens present in the final formulation and concomitantly reducing
production costs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              267

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of the GapC plasmin binding protein (DysGalGapC) of Streptococcus dysgalactiae ATCC 43078, a clinical isolate from bovine mastitis. It is encoded by the GapC gene given in ABA91248. GapC protein, which has no signal sequence or membrane anchor domain, is capable of eliciting an immune response in a vertebrate. The invention provides the GapC genes and proteins of 5 Streptococcus species, as well as recombinant vectors, host cells and vaccine compositions comprising as recombinant vectors, host cells and vaccine sare used to treat or prevent a bacterial infection, especially a streptococcal infection, and mastitis in particular (claimed). GapC proteins are also used in claimed methods for detecting GapC proteins are also used in claimed methods for detecting GapC proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated GapC protein of Streptococcus dysgalactiae, S.agalactiae, S.uberis, S.parauberis, or S.iniae, useful as vaccine component for treating streptococcal infection which causes mastitis in vertebrates.
                                                                                                                               plasmin-binding protein; DysgalGapC; infection; mastitis

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GAS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and activity. (I), nucleic acids encoding (I), are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. (Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. (I) are used to detect Streptococcus in a biological sample. (I) is used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying

Streptococcus proteins

The invention relates to an isolated nucleic acid comprising any one of the 6113 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a call. Also included are: of the nucleic acid, inhibited by the antisense encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) an best cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting fellular proliferation or the activity of a gene in an operon required for the activity of proliferation or that inhibits cellular proliferation; (7) identifying a compound that influences the activity of required for proliferation, or that inhibits cellular proliferation; (8) required for proliferation, or that inhibits cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the strains is present in a culture or collection of product is overexpressed or underexpressed; (12) determining the extent proliferation of an organism. The antisense nucleic acids required for cellular proliferation to isolate candidate molecules for rational derivative proliferation in organism. The arguence is encoded by one of the present did not form part of the sequence is encoded by one of the target prokaryoric essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the sequence is obtained.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              267

                                                                                                                                                                                                                                                                                                                                                      à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (SI), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes.

C Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying chromatography, immunoassays, and distinguishing/identifying

The DNA encoding this sequence was isolated from the S. pyogenes clinical isolate 64/14. The plasmin receptor has a very high affinity for plasmin which, when bound, retains its enzymatic activity but is not regulated (inhibited) by alpha-2-antiplasmin. The receptor protein, when administered concurrently or sequentially, prolongs the activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New DNA encoding bacterial plasmin receptor - useful as thrombolytic agents, used with plasminogen activator or bound to plasmin, also useful in vaccines against bacterial infection.

                                                       (Updated on
plasminogen activator (PA) so allows a reduction in dose, and thus lower the risk of bleeding, and may prevent reocclusion of blood vessels. The protein may be coupled to a fibrin-specific monoclonal antibody to provide targetting to clots. The plasmin receptor may be useful in human or veterinary medicine, for treatment of thrombosis and pulmonary embolism, and for solubilising clots in catheters or shunts.                                                                                                                                                        Polynucleotide sequence AAC66140 encodes the Streptococcal plasmin receptor protein AAY85681. The protein is used in a method for raising immune response in a mammal. The method comprises administering the plasmin receptor protein. The method is useful as a vaccination against group A Streptococcal infections and potentially against a broad range infections associated with pathogens expressing glyceraldehyde-3-phosphate dehydrogenase (GAPDH) or GAPDH-like proteins at their cell surfaces. The vaccine has antibacterial and antihelminthic activity

                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity, (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes.

Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to detect Streptococcus in a biological sample. (I) is used to detectmine whether a compound binds to used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä

The present sequence is that of the GapC plasmin binding protein,

UberGapC, of Streptococcus uberis ATCC 9927. The invention relates to

novel GapC multiple epitope fusion proteins that comprise epitopes from 1

or more of Streptococcus dysgalactiae, Streptococcus agalactiae,

creptococcus parauberis, Streptococcus uberis and Streptococcus iniae

Streptococcus parauberis, Streptococcus uberis and Streptococcus iniae

(see AAMSO665-69). A claimed example is PolyGap4 (see AAMSO664).

Expression vectors and host cells for production of the multiple epitope

(see AAMSO665-69). A claimed example is PolyGap4 (see AAMSO664).

Expression vectors and host cells for production of the multiple epitope

(claimed vaccines for treating or preventing a bacterial infection in a

vertebrate, especially a streptococcal infection in an astitis. They are also used in claimed methods of detecting

Streptococcus antibodies. The multiple epitope proteins are capable of

eliciting broad immunity against a variety of streptococcal infections

while minimising the number of antigens present in the final formulation

and concomitantly reducing production costs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               근
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .

GapC, which has no signal sequence or membrane anchor domain, is capable of eliciting an immune response in a vertebrate. The invention provides the GapC genes and proteins of 5 Streptococcus species, as well as recombinant vectors, host cells and vaccine

compositions comprising GapC polynucleotides or proteins. The vaccines are used to treat or prevent a bacterial infection, especially a streptococcal infection, and mastitis in particular (claimed). GapC proteins are also used in claimed methods for detecting GapC antibodies, and to raise antibodies that are used in claimed methods for detecting GapC proteins. S. uberis is a common pathogen associated with mastitis is cattle, horse, sheep and goat

The present sequence is that of the GapC plasmin binding protein,
AgalGapC, of Streptococcus agalactiae ATCC 27541. The invention relates
to novel GapC multiple epitope fusion proteins that comprise epitopes
C trom 1 or more of Streptococcus describes, Streptococcus agalactiae,
C streptococcus parauberis, Streptococcus uberis and Streptococcus iniae
C see AAMSO665-69). A claimed example is PolyGap4 (see AAMSO664).
C Expression vectors and host cells for production of the multiple epitope
C fusion proteins are provided. The multiple epitope proteins are used in
c claimed vaccines for treating or preventing a bacterial infection in a
C vertebrate, especially a streptococcal infection in a
C vertebrate, especially a streptococcal infection in a
C streptococcus antibodies. The multiple epitope proteins are capable of
C streptococcus antibodies. The multiple epitope proteins are capable of
C streptococcus infections
C streptococcus infections
C claimed vaccing broad immunity against a variety of streptococcal infections
C and concomitantly reducing production costs
                                                                                            Novel GapC multiple epitope fusion polypeptide comprising antigenic determinant of Streptococcus dysgalactiae, S. agalactiae, S. uberis, parauberis, or S. iniae GapC protein useful for treating mastitis in
                                                                                                                                                                                                                                 Claim 8; Fig 2A-B; 116pp; English

The present sequence is that of the GapC plasmin binding protein

(AgalGapC) of Streptococcus agalactiae ATCC 27541, encoded by the GapC

gene given in ABA91249. GapC, which has no signal sequence or membrane

c anchor domain, is capable of eliciting an immune response in a

vertebrate. The invention provides the GapC genes and proteins of 5

c streptococcus species, as well as recombinant vectors, host cells and

vaccine compositions comprising GapC polynucleotides or proteins. The

vaccines are used to treat or prevent a bacterial infection, especially a

streptococcal infection, and mastitis in particular (claimed). GapC

proteins are also used in claimed methods for detecting GapC antibodies,

and to raise antibodies that are used in claimed methods for detecting

GapC proteins. S. agalactiae is a common pathogen associated with

mastitis in cattle, horse, sheep and goat. It also causes septicemia,

meningitis, bacteraemia, impetigo, arthritis, urinary tract infections,

abcesses, spontaneous abortion, etc ., ,, 207 147 ๙ 87 54 Novel isolated GapC protein of Streptococcus dysgalactiae, S.agalactiae S.uberis, S.parauberis, or S.iniae, useful as vaccine component for treating streptococcal infection which causes mastitis in vertebrates. plasmin-binding protein; AgalGapC; infection; mastitis; vaccine; 88 KEGGFEVNGNFIKVSAERDPENIDWATDGVEIVLEALEGTVEVKDGGFDVNGKFIKVSAE 28 MVVKVGINGFGRIGRLAFRRIONVEGVEVTRINDLTDPNMLAHLLKYDTTOGRFDGTVEV 148 KDPEQIDWATDGVEIVLEIDGTVEVKEGGFEVNGQFVKVSAEREPANIDWATDGVEIVLE ----DGTVEVKEGGFEVNGQFVKVSAEREPANIDWATDGVEIVLE ATSFFAKKEAAEKHLHANGAKKVVITAPGGNDVKTVVFNTNHDILDGTETVISGASCTTN Gaps 85; Length 336; Indels gapC plasmin binding protein. The invention relates to a protein comprising or having at least lost identified in the identity to any of the 2469 amino acid sequences, identified in the specification (available on a computer readable format), or its fragment, expressed from 2469 of 2489 identified DNA coding regions from the streptococcus pneumoniae type 4 strain genomic sequence appearing as treptococcus patient by administering the protein, DNA or antibody (in a treating a patient by administering the protein, DNA or antibody (in a composition), a kit comprising first and second primers, which are the composition), a kit comprising first and second primers, which are the sequence not defined in the specification, for amplifying a target sequence contained within a Streptococcus nucleic acid sequence to sequence on tainer is substantially complementary to the target sequence the first primer is substantially complementary to the target sequence and where the parts of the primers having the target sequence to be amplified, assay comprising contactium, where one or more genes or encoding the proteins has been rendered inactive. The proteins, nucleic acid molecules, antibody and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus cut in an announced and preventing a such as pneumoniae, such as pneumoniae, such as pneumoniae, such as pneumoniae, such as pneumoniae, such as pneumoniae, such as pneumoniae, of the proteins of the proteins are such as pneumoniae, of the proteins of the proteins and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    its fragment,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         334
media or ear infection. They are also useful in developing vaccines, diagnostics and antibiotics. The methods are useful for identifying immunodominant proteins. The present sequence is one of the 2469 proteins expressed by the identified coding regions from the genomic sequence. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. (Updated on 23-OCT-2003 to standardise OS field)

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The present sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in the printed pot sequences
                                                                                                                    Carr GJ;

Patent No. 6136323
GENERAL INFORMATION:
APPLICANT: Boyle, Michael D.P.
APPLICANT: Lottenberg, Richard
APPLICANT: Lottenberg, Richard
APPLICANT: Von Mering, Gregory O.
TITLE OF INVENTION: Fibrinolytic Agents
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
ADDRESSEE: David R. Saliwanchik
STREET: 2421 N.W. 41st Street, Suite A-1
CITY: Gainesville
FL
                                                                                                                                                                                                                                                                                                                                                                                                                                      COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25

Sequence 5513, Application US/09134001C

GENERAL INFORMATION:

APPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO E

TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/134,001C

CURRENT FILING DATE: 1998-08-13

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-08-14

NUMBER OF SEQ ID NOS: 5674
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gape

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
